Ticker	Cost	Price	Support	Resist.	OBV	MACD	Trend	Rec.	Important Note
MU	424.62	914.50	652.21	1089.29	Falling	Bearish Territory	Bearish	Hold	Position remains highly profitable relative to the 424.62 entry cost. However, the short-term trend has rolled over with falling OBV and a bearish MACD crossover. The poor Risk/Reward ratio of 1:0.67 indicates that initiating new long positions here is highly unfavorable.
NVDA	220.80	203.24	199.34	236.54	Falling	Bearish Territory	Bearish	Hold	Currently trading below the 220.80 entry cost. While the structural Risk/Reward ratio is theoretically high (1:8.55) due to proximity to the 1-Month Support at 199.34, the bearish MACD and falling OBV warn against averaging down. Hold and monitor if support holds.
ORCL	183.72	206.12	178.80	250.25	Falling	Bearish Territory	Bearish	Hold	Price is still above the 183.72 entry cost, but momentum is clearly deteriorating. With a bearish MACD and falling OBV, the stock is experiencing distribution. The 1:1.62 Risk/Reward profile does not justify adding exposure at this juncture.
SNDK	1418.17	1682.01	1277.33	1861.00	Rising	Bearish Territory	Sideways	Hold	Solid gains are preserved from the 1418.17 entry. Despite rising OBV signifying underlying accumulation, the MACD is in bearish territory and the Risk/Reward ratio is poor at 1:0.44. Hold current position but avoid new buys near the resistance ceiling.

Generated automatically on 2026-06-10 22:26:39 (Thailand Time)

Ticker	Cost	Price	Support	Resist.	OBV	MACD	Trend	Rec.	Important Note
MSFT	455.37	401.76	397.47	466.32	Falling	Bearish Territory	Bearish	Sell	Trading significantly below the 455.37 entry cost and rapidly approaching major support at 397.47. A combination of falling OBV and a bearish MACD suggests a strong lack of buying interest, making it prudent to cut losses to protect remaining capital.
TSM	424.30	416.25	385.06	450.16	Rising	Bearish Territory	Sideways	Hold	Trading slightly below the 424.30 entry cost. Rising OBV indicates positive volume divergence, but the bearish MACD state advises patience. Hold and wait for a bullish MACD crossover before committing further capital.
LLY	971.12	1159.83	971.18	1182.73	Rising	Bullish Territory	Bullish	Hold	Position is deeply in the green from the 971.12 entry. While MACD is bullish and OBV is rising, the Risk/Reward ratio is an extremely poor 1:0.12 as the price trades immediately beneath the 1-Month Resistance at 1182.73. Do not add exposure here.
LRCX	305.41	328.90	263.71	349.09	Rising	Bearish Territory	Sideways	Hold	The position is secure above the 305.41 entry. Rising OBV is encouraging, but momentum is lagging with MACD in bearish territory. Combined with a weak Risk/Reward profile of 1:0.31, new purchases should be avoided.

Daily Market Report - Watchlist Technical Summary

Ticker	Cost	Price	Support	Resist.	OBV	MACD	Trend	Rec.	Important Note
NOW	107.68	108.25	85.44	139.20	Falling	Bearish Territory	Bearish	Hold	Price is hovering immediately above the 107.68 entry cost. Given the falling OBV and bearish MACD, the stock lacks upward momentum. Maintain a tight stop-loss just below your entry cost to protect capital.
AMD	448.37	459.00	393.36	546.44	Falling	Bearish Territory	Bearish	Hold	Slightly above the 448.37 entry cost, but the technical structure is weakening. Falling OBV and a bearish MACD signal mean distribution is underway. Do not add to this position; prepare to exit if entry support fails.
CACI	524.53	526.98	480.38	545.29	Falling	Bullish Territory	Sideways	Hold	While the MACD remains in bullish territory, the falling OBV indicates a lack of volume support. Additionally, trading right below the 1-Month Resistance at 545.29 yields a poor Risk/Reward of 1:0.39, warranting a Hold stance.
AVGO	446.13	375.51	370.33	495.00	Falling	Bearish Territory	Bearish	Sell	Currently experiencing a severe drawdown from the 446.13 entry cost. The stock is hovering just above its 1-Month Support of 370.33 with falling OBV and negative MACD momentum. Exit the position to prevent further capital erosion.
ANET	171.11	151.58	135.37	177.48	Falling	Bearish Territory	Bearish	Sell	Trading well below the entry cost of 171.11. The bearish trend is validated by both a bearish MACD status and falling OBV. Capital preservation is prioritized; closing the position is recommended.
