

# Daily Market Report - Watchlist Technical Summary

Generated automatically on 2026-06-10 17:11:32 (Thailand Time)

| Ticker | Cost   | Price  | Support | Resist. | OBV     | MACD              | Trend   | Rec. | Important Note                                                                                                                                                                                                                                                                                                                                                                 |
|--------|--------|--------|---------|---------|---------|-------------------|---------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MU     | 424.62 | 935.89 | 652.21  | 1089.29 | Falling | Bearish Crossover | Bearish | Hold | Position retains strong profit relative to the 424.62 cost basis. However, momentum is shifting negatively as shown by the falling OBV and a confirmed Bearish Crossover in the MACD. Combined with a poor Risk/Reward ratio of 1:0.54 and high distance to the 1Mo Support (652.21), we advise against adding exposure and recommend using trailing stops to protect capital. |
| NVDA   | 220.80 | 208.19 | 204.33  | 236.54  | Falling | Bearish Territory | Bearish | Hold | Currently trading below the 220.80 entry cost and hovering just above key 1Mo Support at 204.33. Although momentum is weak with falling OBV and the MACD in Bearish Territory, the highly favorable 1:7.34 Risk/Reward ratio warrants holding the position to see if support holds, with a hard stop-loss just below 204.33.                                                   |
| ORCL   | 183.72 | 205.81 | 178.80  | 250.25  | Falling | Bullish Territory | Bearish | Hold | Remaining profitable relative to the 183.72 entry. MACD remains in Bullish Territory but is weakening, and the falling OBV indicates volume distribution on recent pullbacks. With a moderate 1:1.65 Risk/Reward ratio and support at 178.80, holding is the preferred tactical action while monitoring for volume stabilization.                                              |

# Daily Market Report - Watchlist Technical Summary

Generated automatically on 2026-06-10 17:11:32 (Thailand Time)

| Ticker | Cost    | Price   | Support | Resist. | OBV     | MACD              | Trend   | Rec. | Important Note                                                                                                                                                                                                                                                                                                                                                            |
|--------|---------|---------|---------|---------|---------|-------------------|---------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SNDK   | 1418.17 | 1646.54 | 1277.33 | 1861.00 | Falling | Bearish Territory | Bearish | Hold | The position is secure above the 1418.17 entry cost. However, the technical environment is deteriorating with a falling OBV and a MACD in Bearish Territory. With a poor 1:0.58 Risk/Reward profile and significant downside space to 1Mo Support (1277.33), hold with tight trailing stops to lock in gains.                                                             |
| MSFT   | 455.37  | 403.41  | 400.88  | 466.32  | Falling | Bearish Territory | Bearish | Hold | Trading in negative territory relative to the 455.37 cost, immediately testing the critical 1Mo Support level at 400.88. Even though falling OBV and Bearish MACD imply strong selling pressure, the highly asymmetric 1:24.87 Risk/Reward ratio justifies holding to check for a structural defense at support. A clean breach of 400.88 requires immediate liquidation. |
| TSM    | 424.30  | 427.92  | 385.06  | 450.16  | Falling | Bearish Crossover | Bearish | Hold | Trading flat against the 424.30 entry cost. Short-term momentum is negative, validated by a Bearish MACD Crossover and falling OBV. Because the stock has an unfavorable 1:0.52 Risk/Reward profile and is trading near its 450.16 resistance ceiling, do not buy or add size. Manage risk tightly near break-even.                                                       |

## Daily Market Report - Watchlist Technical Summary

Generated automatically on 2026-06-10 17:11:32 (Thailand Time)

| Ticker | Cost   | Price   | Support | Resist. | OBV     | MACD              | Trend   | Rec. | Important Note                                                                                                                                                                                                                                                                                                                                                                         |
|--------|--------|---------|---------|---------|---------|-------------------|---------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LLY    | 971.12 | 1144.68 | 943.26  | 1182.73 | Rising  | Bullish Territory | Bullish | Hold | Strong underlying technicals with rising OBV and a Bullish Territory MACD support the massive gains from the 971.12 entry. However, because the price is trading immediately underneath its 1-Month Resistance ceiling (1182.73), the Risk/Reward ratio is a poor 1:0.19. Do not initiate new buy orders here; hold the current position and allow profits to run with trailing stops. |
| LRCX   | 305.41 | 327.16  | 263.71  | 346.19  | Falling | Bearish Crossover | Bearish | Hold | Position sits slightly above the 305.41 cost, but a Bearish MACD Crossover and falling OBV indicate distribution. With a highly unfavorable 1:0.30 Risk/Reward ratio due to proximity to the 346.19 resistance ceiling, protect capital by avoiding new purchases and holding existing positions with trailing stops.                                                                  |
| NOW    | 107.68 | 106.97  | 85.44   | 139.20  | Falling | Bullish Territory | Bearish | Hold | Currently hovering flat relative to the 107.68 entry cost. MACD is still in Bullish Territory, but the falling OBV signals a reduction in buying pressure. Supported by a viable 1:1.50 Risk/Reward ratio, we recommend holding the position while monitoring the 85.44 support level to manage capital risk.                                                                          |

# Daily Market Report - Watchlist Technical Summary

Generated automatically on 2026-06-10 17:11:32 (Thailand Time)

| Ticker | Cost   | Price  | Support | Resist. | OBV     | MACD              | Trend    | Rec. | Important Note                                                                                                                                                                                                                                                                                                                                                               |
|--------|--------|--------|---------|---------|---------|-------------------|----------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AMD    | 448.37 | 475.50 | 393.36  | 546.44  | Falling | Bearish Territory | Bearish  | Hold | Position remains profitable relative to the 448.37 entry. However, MACD has shifted into Bearish Territory and OBV is falling, indicating a lack of volume support on rallies. With a poor 1:0.86 Risk/Reward ratio, avoid adding capital and instead maintain a stop-loss to guard against a pullback toward 393.36 support.                                                |
| CACI   | 524.53 | 525.04 | 465.00  | 545.29  | Falling | Bullish Territory | Sideways | Hold | Trading flat against the 524.53 entry cost. Although MACD shows positive momentum in Bullish Territory, falling OBV reveals weak volume validation. Because the price is trading immediately below its 1Mo Resistance ceiling (545.29), presenting a poor 1:0.34 Risk/Reward profile, we strictly avoid issuing a Buy. Hold to see if a breakout occurs, keeping risk tight. |
| AVGO   | 446.13 | 392.16 | 385.59  | 495.00  | Falling | Bearish Territory | Bearish  | Hold | Trading significantly below the 446.13 entry cost, sitting immediately above major 1Mo Support at 385.59. Momentum indicators are weak with falling OBV and a Bearish Territory MACD, but the extreme 1:15.65 Risk/Reward profile warrants holding for a technical bounce. Exit immediately if the 385.59 support level is broken on volume.                                 |

Generated automatically on 2026-06-10 17:11:32 (Thailand Time)

| Ticker | Cost   | Price  | Support | Resist. | OBV     | MACD              | Trend   | Rec. | Important Note                                                                                                                                                                                                                                                                                                 |
|--------|--------|--------|---------|---------|---------|-------------------|---------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ANET   | 171.11 | 152.16 | 135.13  | 177.48  | Falling | Bullish Territory | Bearish | Hold | Currently below the 171.11 entry cost following a healthy correction. MACD remains structurally in Bullish Territory, but falling OBV warns of recent selling pressure. Given a balanced Risk/Reward ratio of 1:1.49, holding is recommended to allow the stock to consolidate above the 135.13 support level. |
