Ticker	Cost	Price	Support	Resist.	OBV	MACD	Trend	Rec.	Important Note
MU	424.62	949.28	652.21	1089.29	Falling	Bearish Crossover	Bearish	Hold	With MU trading far above your entry cost of 424.62, substantial paper profits are secured. However, a bearish MACD crossover, falling OBV, and a poor risk/reward ratio of 1:0.47 near resistance suggest a distribution phase. Protect capital and do not buy at these extended levels.
NVDA	220.80	208.64	204.33	236.26	Falling	Bearish Territory	Bearish	Hold	Currently trading below your entry cost of 220.80. Although the nominal risk/reward ratio is highly favorable at 1:6.41 because the price is right above major 1-Month support at 204.33, the falling OBV and bearish MACD momentum suggest persistent selling pressure. Hold to see if support stabilizes before risking more capital.
ORCL	183.72	211.82	178.80	250.25	Falling	Bullish Territory	Bearish	Hold	Bullish MACD territory is contradicted by a sharp price pullback from recent highs of 248.15 and a falling OBV trend. Since the latest price of 211.82 is still safely above your entry cost of 183.72, holding is prudent. However, avoid new buys as momentum has cooled.

Ticker	Cost	Price	Support	Resist.	OBV	MACD	Trend	Rec.	Important Note
SNDK	1418.17	1642.00	1277.33	1861.00	Falling	Bearish Territory	Bearish	Hold	SNDK is trading above your 1418.17 entry cost, but technicals are deteriorating with a bearish MACD and falling OBV. A poor risk/reward ratio of 1:0.60 discourages adding to the position. Hold to protect capital and look to secure gains if support begins to buckle.
MSFT	455.37	411.74	400.01	466.32	Falling	Bearish Territory	Bearish	Hold	MSFT is trading well below your entry cost of 455.37. While the risk/reward profile appears mathematically favorable at 1:4.65 due to proximity to the 400.01 support floor, the combination of falling OBV and bearish MACD momentum indicates that buying pressure is absent. Hold and monitor support closely.
TSM	424.30	426.80	385.06	450.16	Falling	Bearish Crossover	Bearish	Hold	TSM is currently hovering virtually at your entry cost of 424.30. A bearish MACD crossover combined with a falling OBV trend and a poor risk/reward ratio of 1:0.56 suggests downside risk. Do not buy; hold with a strict stop-loss near support at 385.06.

Ticker	Cost	Price	Support	Resist.	OBV	MACD	Trend	Rec.	Important Note
LLY	971.12	1149.15	941.64	1182.73	Rising	Bullish Territory	Bullish	Hold	LLY displays strong bullish momentum with a rising OBV and MACD in bullish territory. However, the stock is trading immediately underneath its 1-Month resistance ceiling of 1182.73, resulting in an asymmetric, poor risk/reward ratio of 1:0.16. To protect capital, do not buy at these extended levels; hold to ride the existing position.
LRCX	305.41	324.45	263.71	346.19	Falling	Bearish Territory	Bearish	Hold	LRCX remains above your 305.41 entry cost, but the technical structure is weak. The MACD has shifted into bearish territory, volume is falling via OBV, and the risk/reward ratio is highly unfavorable at 1:0.36. Maintain a hold position but refrain from allocating new capital.
NOW	107.68	114.19	85.44	139.20	Falling	Bullish Territory	Bearish	Hold	Although NOW's MACD is in bullish territory, the falling OBV and recent steep pullback from 135.86 to 114.19 indicate institutional distribution. Since it remains above your entry cost of 107.68, hold the position, but avoid new buys given the mediocre risk/reward profile of 1:0.87.

Ticker	Cost	Price	Support	Resist.	OBV	MACD	Trend	Rec.	Important Note
AMD	448.37	490.33	393.36	546.44	Falling	Bearish Territory	Bearish	Hold	AMD is holding above your entry cost of 448.37, but short-term momentum has turned bearish with MACD in bearish territory and OBV falling. The current risk/reward ratio of 1:0.58 is poor, suggesting substantial downside potential. Hold the asset but protect profits with trailing stops.
CACI	524.53	519.14	465.00	545.29	Falling	Bullish Territory	Bearish	Hold	CACI is currently trading slightly below your entry cost of 524.53. Despite the MACD indicating bullish territory, the falling OBV and a poor risk/reward ratio of 1:0.48 near resistance suggest limited upside. Hold for now to see if support at 465.00 holds, but do not average down.
AVGO	446.13	396.60	385.59	495.00	Falling	Bearish Territory	Bearish	Hold	AVGO has experienced a severe drawdown below your entry cost of 446.13 and is trading close to its support floor at 385.59. Although the mathematical risk/reward is highly attractive at 1:8.94, the bearish MACD and falling OBV warn against attempting to catch this falling knife. Hold and monitor support.
ANET	171.11	156.40	135.13	177.48	Falling	Bullish Territory	Bearish	Hold	ANET has slipped below your entry cost of 171.11. Although the MACD remains technically in bullish territory, the declining OBV and mediocre 1:0.99 risk/reward profile warrant caution. Do not buy; hold the position and monitor if the 135.13 support holds.
