Ticker	Cost	Price	Support	Resist.	OBV	MACD	Trend	Rec.	Important Note
MU	424.62	nan	652.21	1089.29	Falling	Bearish Territory	Bearish	Hold	Position remains highly profitable relative to the entry cost of 424.62. However, with the OBV falling and the MACD in bearish territory, short-term momentum is weak. Protect paper gains and hold rather than adding exposure.
NVDA	220.80	nan	204.33	236.26	Rising	Bearish Territory	Bearish	Hold	The position is slightly underwater against the 220.80 entry cost, with the price trading near 208.64. Rising OBV provides positive volume divergence, but the bearish MACD suggests holding for confirmation before taking action near the 204.33 support.
ORCL	183.72	nan	178.80	250.25	Falling	Bullish Territory	Bullish	Hold	Position is profitable compared to the 183.72 entry. MACD remains in bullish territory, but a falling OBV indicates a lack of buying pressure on recent pullbacks. Hold to see if structural support at 178.80 can halt the slide.
SNDK	1418.17	nan	1277.33	1861.00	Falling	Bearish Territory	Bearish	Hold	Currently well above the 1418.17 entry cost. Near-term dynamics are bearish due to a falling OBV and a bearish MACD crossover. Maintain a hold posture to lock in profits, watching for potential stabilization above the 1277.33 support.

Daily Market Report - Watchlist Technical Summary

Ticker	Cost	Price	Support	Resist.	OBV	MACD	Trend	Rec.	Important Note
MSFT	455.37	nan	400.01	466.32	Falling	Bearish Territory	Bearish	Sell	The position is underwater from the 455.37 entry cost. With the price at 411.74 fast approaching critical support at 400.01 on a falling OBV and a bearish MACD, capital preservation dictates exiting the position to avoid further breakdown.
TSM	424.30	nan	385.06	450.16	Rising	Bearish Territory	Sideways	Hold	Trading near break-even relative to the 424.30 entry cost. A rising OBV indicates constructive institutional accumulation, but the bearish MACD and close proximity to the 450.16 resistance limit the risk/reward for new buying. Hold for now.
LLY	971.12	nan	941.64	1182.73	Rising	Bullish Territory	Bullish	Hold	Strong profits relative to the 971.12 entry cost. Although MACD is in bullish territory and OBV is rising, the price is immediately underneath the 1-month resistance ceiling of 1182.73. Do not add fresh capital here due to poor R/R; hold existing shares.
LRCX	305.41	nan	263.71	346.19	Falling	Bearish Territory	Bearish	Hold	The position remains profitable relative to the 305.41 entry cost. However, the momentum environment has deteriorated with a bearish MACD and falling OBV. Hold to see if price stabilizes above the 263.71 support before deciding on exit strategy.

Ticker	Cost	Price	Support	Resist.	OBV	MACD	Trend	Rec.	Important Note
NOW	107.68	nan	85.44	139.20	Rising	Bullish Territory	Bullish	Buy	Excellent technical setup. Price is well above the 107.68 entry cost, OBV is rising to validate the upward trend, and the MACD is in bullish territory. With a highly favorable risk/reward profile relative to the 139.20 resistance, adding to the position is supported.
AMD	448.37	nan	393.36	546.44	Falling	Bearish Territory	Bearish	Hold	Position remains in profit compared to the 448.37 entry. Short-term momentum is distinctly bearish with a falling OBV and bearish MACD. Hold existing shares, but refrain from adding new capital until a clear floor is established above the 393.36 support.
CACI	524.53	nan	465.00	545.29	Falling	Bullish Territory	Sideways	Hold	The price is sitting just under the 524.53 entry cost and trading immediately beneath the 545.29 resistance ceiling. Despite a bullish MACD crossover, the falling OBV and unfavorable Risk/Reward ratio make a 'Buy' high-risk. Protect capital and hold.
AVGO	446.13	nan	385.59	495.00	Falling	Bearish Territory	Bearish	Sell	Position is deeply underwater compared to the 446.13 entry cost. The price is hovering precariously near the 385.59 key support. Given the sharp downward trend, falling OBV, and bearish MACD momentum, selling to protect remaining capital is recommended.

Daily Market Report - Watchlist Technical Summary

Ticker	Cost	Price	Support	Resist.	OBV	MACD	Trend	Rec.	Important Note
ANET	171.11	nan	135.13	177.48	Falling	Bullish Territory	Sideways	Hold	The position is underwater from the 171.11 entry cost. While the MACD has a bullish crossover, the falling OBV suggests a lack of buying volume to sustain the trend. Hold the position as it remains safely above the 135.13 major support.
