Ticker	Cost	Price	Support	Resist.	OBV	MACD	Trend	Rec.	Important Note
MU	424.62	907.16	652.21	1089.29	Falling	Bearish Territory	Bearish	Hold	Massive profit cushion exists relative to your 424.62 entry. However, short-term distribution is clear with falling OBV and a bearish MACD crossover. Avoid adding exposure here as the Risk/Reward ratio of 1:0.71 is highly unfavorable near the 1089.29 resistance ceiling.
NVDA	220.80	203.59	199.34	236.54	Falling	Bearish Territory	Bearish	Hold	Position is currently underwater. While the structural Risk/Reward ratio of 1:7.75 appears highly favorable due to proximity to 1-Month Support (199.34), both OBV and MACD confirm strong downward momentum. Hold only if utilizing 199.34 as a strict, non-negotiable stop-loss level.
ORCL	183.72	206.19	178.80	250.25	Falling	Bearish Territory	Bearish	Hold	You retain a comfortable profit cushion above your 183.72 entry. The stock is undergoing a corrective phase, validated by falling OBV and a bearish MACD. Monitor the 178.80 support level to protect gains; do not add capital under current distribution conditions.
SNDK	1418.17	1663.11	1277.33	1861.00	Rising	Bearish Territory	Sideways	Hold	Despite the bearish MACD signal during this consolidation phase, the rising OBV suggests institutional accumulation is supporting the pullback. Risk/Reward (1:0.51) prevents new buying, but your 1418.17 entry cost remains highly secure above the 1277.33 structural support.

Daily Market Report - Watchlist Technical Summary

Ticker	Cost	Price	Support	Resist.	OBV	MACD	Trend	Rec.	Important Note
MSFT	455.37	403.69	397.47	466.32	Falling	Bearish Territory	Bearish	Hold	Position is deeply underwater. The price is hovering immediately above major support at 397.47. Although the nominal Risk/Reward ratio is 1:10.06, the severe distribution (falling OBV) and bearish MACD require a defensive posture. Exit immediately if 397.47 support fails.
TSM	424.30	416.15	385.06	450.16	Rising	Bearish Territory	Sideways	Hold	Currently trading slightly below your entry cost. The rising OBV trend provides a bullish volume divergence against the bearish MACD, indicating strong underlying accumulation. Hold and watch for MACD stabilization near the 385.06 support line.
LLY	971.12	1151.13	971.18	1182.73	Rising	Bullish Territory	Bullish	Hold	Excellent entry at 971.12. Strong bullish momentum is backed by rising OBV and supportive MACD. However, the price is trading immediately underneath the 1-Month Resistance at 1182.73, yielding a terrible Risk/Reward of 1:0.18. Do not add to this position; implement trailing stops to lock in massive gains.
LRCX	305.41	327.33	263.71	349.09	Rising	Bearish Territory	Sideways	Hold	Position is in profit. Rising OBV shows healthy underlying volume structure, though MACD is lagging in bearish territory. With a poor Risk/Reward ratio of 1:0.34, avoid adding new shares here and allow the correction to mature above your 305.41 entry level.

Ticker	Cost	Price	Support	Resist.	OBV	MACD	Trend	Rec.	Important Note
NOW	107.68	108.72	85.44	139.20	Falling	Bearish Territory	Bearish	Hold	Trading virtually flat against your 107.68 entry. Weak volume structure (falling OBV) and negative MACD momentum present downside risk toward the 85.44 support level. Maintain a tight stop-loss near breakeven to mitigate capital erosion.
AMD	448.37	459.96	393.36	546.44	Falling	Bearish Territory	Bearish	Hold	Price has retraced significantly to hover just above your 448.37 entry. Given the bearish MACD and falling OBV, downward pressure is dominant. Monitor closely; if the price falls below your entry, the next major support level is distant at 393.36.
CACI	524.53	526.94	480.38	545.29	Falling	Bullish Territory	Bullish	Hold	Position is slightly positive. While the MACD remains in bullish territory, the falling OBV displays an active bearish volume divergence. Combined with a very poor 1:0.39 Risk/Reward ratio right below the 545.29 resistance ceiling, further buying must be avoided.
AVGO	446.13	376.18	370.33	495.00	Falling	Bearish Territory	Bearish	Sell	Position is severely compromised, trading far below your 446.13 cost. Despite a mathematical 1:20.31 Risk/Reward ratio, the stock has broken down on heavy distribution (falling OBV) and a deeply negative MACD. Capital protection dictates cutting losses before the 370.33 floor is breached.

Ticker	Cost	Price	Support	Resist.	OBV	MACD	Trend	Rec.	Important Note
ANET	171.11	152.22	135.37	177.48	Falling	Bearish Territory	Bearish	Hold	The position is underwater relative to your 171.11 entry. Negative price action is validated by falling OBV and a bearish MACD. If holding, use the 1-Month Support of 135.37 as the absolute line in the sand to limit further portfolio damage.
