Ticker	Cost	Price	Support	Resist.	OBV	MACD	Trend	Rec.	Important Note
MU	424.62	949.28	652.21	1089.29	Falling	Bearish Crossover	Bearish	Hold	A massive profit cushion exists from the 424.62 entry. However, immediate technicals have deteriorated, marked by a bearish MACD crossover and a falling OBV trend. Given the poor Risk/Reward ratio of 1:0.47, adding exposure here is highly unfavorable. Hold current positions but implement trailing stops to lock in accrued capital.
NVDA	220.80	208.64	204.33	236.26	Falling	Bearish Territory	Bearish	Hold	Price is trading below the 220.80 entry cost. Structurally, the Risk/Reward ratio is highly favorable at 1:6.41 due to immediate proximity to the 1-Month Support of 204.33. However, momentum remains strongly bearish with falling OBV and MACD in bearish territory. Hold and monitor support closely; a breach of 204.33 requires immediate risk mitigation.
ORCL	183.72	211.82	178.80	250.25	Falling	Bullish Territory	Sideways	Hold	The position remains profitable relative to the 183.72 entry. While the MACD is technically in Bullish Territory, the short-term trend has softened as evidenced by falling OBV and a pullback from recent swing highs. With a moderate Risk/Reward ratio of 1:1.16, maintain a Hold posture to allow consolidation above support.

Ticker	Cost	Price	Support	Resist.	OBV	MACD	Trend	Rec.	Important Note
SNDK	1418.17	1642.00	1277.33	1861.00	Falling	Bearish Territory	Bearish	Hold	The trade is in profit relative to the 1418.17 entry. However, momentum is weakening with MACD in bearish territory and OBV falling. Due to a poor Risk/Reward profile of 1:0.60, new buys are not recommended. Hold the position with a strict stop-loss to protect profits against further downside mean reversion.
MSFT	455.37	411.74	400.01	466.32	Falling	Bearish Territory	Bearish	Hold	Currently trading at a loss relative to the 455.37 entry. Although the current Risk/Reward ratio of 1:4.65 is mathematically attractive as price approaches the 1-Month Support of 400.01, the falling OBV and bearish MACD indicate institutional distribution. Hold the position for a potential support bounce, but prepare to exit if 400.01 fails.
TSM	424.30	426.80	385.06	450.16	Falling	Bearish Crossover	Bearish	Hold	Price is essentially flat relative to the 424.30 entry cost. A bearish MACD crossover combined with a falling OBV trend highlights a loss of upward momentum. With a poor Risk/Reward ratio of 1:0.56, initiating new buy orders is highly discouraged. Hold the position with a tight stop set near the entry level.

Daily Market Report - Watchlist Technical Summary

Ticker	Cost	Price	Support	Resist.	OBV	MACD	Trend	Rec.	Important Note
LLY	971.12	1149.15	941.64	1182.73	Rising	Bullish Territory	Bullish	Hold	This trade enjoys a substantial profit cushion from the 971.12 entry, backed by rising OBV and a bullish MACD. However, because price is trading immediately underneath its 1-Month Resistance ceiling of 1182.73, the Risk/Reward ratio is an extremely poor 1:0.16. To protect capital, do not buy at these extended levels. Hold and manage with trailing stops.
LRCX	305.41	324.45	263.71	346.19	Falling	Bearish Crossover	Bearish	Hold	Currently slightly profitable relative to the 305.41 entry. Momentum indicators have turned negative, flashing a bearish MACD crossover alongside falling OBV. The poor Risk/Reward ratio of 1:0.36 indicates limited upside potential. Hold existing shares with a trailing stop-loss to defend the entry level.
NOW	107.68	114.19	85.44	139.20	Falling	Bullish Territory	Sideways	Hold	The position is slightly in profit above the 107.68 entry. While the MACD remains in Bullish Territory, the volume trend (OBV) is falling, creating a bearish divergence. With a sub-optimal Risk/Reward ratio of 1:0.87, avoid adding size. Hold the position to see if the price can stabilize and build a proper base.

Ticker	Cost	Price	Support	Resist.	OBV	MACD	Trend	Rec.	Important Note
AMD	448.37	490.33	393.36	546.44	Falling	Bearish Territory	Bearish	Hold	A comfortable profit cushion remains relative to the 448.37 entry. However, short-term momentum has shifted to the downside with MACD in bearish territory and OBV falling. The current Risk/Reward profile of 1:0.58 makes adding to this position unfavorable. Maintain a Hold and monitor the 393.36 support level closely.
CACI	524.53	519.14	465.00	545.29	Falling	Bullish Territory	Sideways	Hold	Trading slightly below the 524.53 entry cost. MACD is in Bullish Territory, but falling OBV suggests a lack of buying commitment on this pullback. With a poor Risk/Reward ratio of 1:0.48, averaging down is not advised. Hold the position and look for stabilization near the 465.00 support.
AVGO	446.13	396.60	385.59	495.00	Falling	Bearish Territory	Bearish	Hold	Trading at a significant loss relative to the 446.13 entry. While the Risk/Reward ratio is highly favorable at 1:8.94 due to proximity to support at 385.59, the volume trend (OBV falling) and bearish MACD indicate severe selling pressure. Hold current positions but prepare to execute stop-losses if support fails to hold.

Ticker	Cost	Price	Support	Resist.	OBV	MACD	Trend	Rec.	Important Note
ANET	171.11	156.40	135.13	177.48	Falling	Bullish Territory	Sideways	Hold	Currently down relative to the 171.11 entry cost. Although MACD is in Bullish Territory, falling OBV indicates a lack of volume support on price bounces. With a mediocre Risk/Reward ratio of 1:0.99, do not accumulate more shares. Hold and monitor support at 135.13.
