WATCHLIST TECHNICAL SUMMARY

Generated automatically on 2026-06-11 11:51:06 (Thailand Time)

Ticker	Cost	Price	Support	Resist.	OBV	MACD	Trend	Rec.	Important Note
MU	424.62	891.88	652.21	1089.29	Falling	Bearish Territory	Bearish	Sell	The position is highly profitable, but volume is exhausted with a falling OBV and the MACD is in Bearish Territory. Under Rule 2, a Take-Profit Sell is triggered to lock in significant gains before further retracement.
NVDA	220.80	200.42	199.34	236.54	Falling	Bearish Territory	Bearish	Sell	The position is currently unprofitable. The latest close of 200.42 is sitting immediately above the critical 1Mo Support of 199.34. With falling OBV and MACD in Bearish Territory, no recovery is forming, necessitating a defensive Sell to prevent a structural breakdown.
ORCL	183.72	201.26	178.80	250.25	Falling	Bearish Crossover	Bearish	Sell	Position is profitable, but the MACD has registered a Bearish Crossover and OBV is falling. Rule 2 dictates a Take-Profit Sell to protect open capital from momentum exhaustion.
SNDK	1418.17	1643.23	1277.33	1861.00	Rising	Bearish Territory	Bearish	Sell	Although the position is profitable and OBV is rising, the MACD has slipped into Bearish Territory (130.95 vs Signal 148.58). To prevent giving back gains, Rule 2 triggers a Take-Profit Sell.
MSFT	455.37	397.36	398.48	466.32	Falling	Bearish Territory	Bearish	Sell	This unprofitable position has broken its critical 1Mo Support level of 398.48 (closing at 397.36). Combined with a falling OBV and bearish MACD, a defensive Sell must be executed to limit capital loss.
TSM	424.30	408.75	385.06	450.16	Rising	Bearish Territory	Sideways	Hold	The position is unprofitable, but the price of 408.75 remains well above the 1Mo Support of 385.06. A rising OBV indicates positive accumulation and a potential technical support recovery is forming, justifying a Hold.
LLY	971.12	1136.37	943.26	1182.73	Rising	Bullish Territory	Bullish	Hold	The position is highly profitable, MACD is firmly in Bullish Territory, and OBV is rising. These indicators demonstrate strong upward momentum; therefore, we Hold to let profits run.

WATCHLIST TECHNICAL SUMMARY

Generated automatically on 2026-06-11 11:51:06 (Thailand Time)

Ticker	Cost	Price	Support	Resist.	OBV	MACD	Trend	Rec.	Important Note
LRCX	305.41	321.80	263.71	349.09	Rising	Bearish Territory	Bearish	Sell	The position is currently profitable, but the MACD is in Bearish Territory (14.71 vs Signal 15.29). Rule 2 mandates a Take-Profit Sell to lock in remaining gains as momentum turns negative.
NOW	107.68	106.06	85.44	139.20	Falling	Bearish Crossover	Bearish	Sell	Position is unprofitable. With a falling OBV and a MACD Bearish Crossover, there is no evidence of a technical support recovery forming. We execute a defensive Sell to preserve capital.
AMD	448.37	452.40	393.36	546.44	Falling	Bearish Territory	Bearish	Sell	The position is profitable, but OBV is falling and MACD is in Bearish Territory. Momentum and volume are exhausted, triggering a Take-Profit Sell under Rule 2 to protect gains.
CACI	524.53	521.14	465.00	545.29	Falling	Bullish Territory	Sideways	Hold	This unprofitable position is holding close to its entry point. While OBV is falling, the MACD remains in Bullish Territory. This suggests a technical support recovery is attempting to form above the 465.00 level, justifying a Hold.
AVGO	446.13	372.10	370.33	495.00	Falling	Bearish Territory	Bearish	Sell	The position is unprofitable and trading at 372.10, resting on the absolute precipice of the 370.33 support level. Because OBV is falling and MACD is in Bearish Territory, a structural break is highly likely. Sell defensively.
ANET	171.11	151.76	135.13	177.48	Falling	Bearish Crossover	Bearish	Sell	The position is unprofitable and experiencing a sharp downward trend. With a falling OBV and a fresh MACD Bearish Crossover, there is no technical support recovery forming. We Sell defensively to prevent further drawdown.
