

Daily Market Report - Watchlist Technical Summary

Generated automatically on 2026-06-07 18:49:48

Stock Name	Resistance	Support	Trend	Important Note
MU	1089.29	820.30	Bearish	A severe high-volume reversal from the 1089.29 peak closed at the absolute session low of 864.01 on June 5. A break below the key support of 820.30 confirms a complete retracement of the late May breakout.
NVDA	232.01	204.33	Bearish	Experienced a bearish engulfing breakdown below the key 210.00 support zone on elevated volume (218M). Major downside risk is open if the June 5 low of 204.33 fails.
ORCL	250.25	209.45	Bearish	The parabolic rally to 250.25 has suffered a rapid 14.6% retracement, finding tentative support near the 208.00-209.45 gap-fill zone. Watch for stabilization here.
SNDK	1861.00	1514.36	Bearish	A sharp high-volume rejection at 1861.00 led to a rapid markdown toward the critical support at 1514.36. Failure to hold 1500.00 risks a decline back to the May base.
MSFT	466.32	409.58	Bearish	Failed to sustain the breakout above the 450.00 level, retracing almost the entire move back to the initial consolidation support range of 409.58 to 414.40.
VST	167.40	147.50	Bearish	Consistently printing lower highs and lower lows in a well-defined descending channel, now testing critical support at 147.50 where buyers must defend.
TSM	450.16	412.79	Bearish	Faced heavy institutional distribution near the 450.00 psychological resistance, causing a drop to test the primary support cluster between 410.00 and 413.00.
LLY	1166.29	1052.15	Bullish	Demonstrating exceptional relative strength with a strong breakout to new highs at 1166.29 on expanding volume, completely defying the broader market selloff.
LRCX	346.19	302.74	Bearish	Severe high-volume liquidation on June 5 erased all gains from the late-May expansion. The stock is currently sitting precariously on its key 302.74 support.
NOW	139.20	111.56	Bearish	After surging to 139.20, the stock has undergone a major mean-reversion phase, closing near its immediate support of 111.56. A break below this risks filling the gap down to 108.73.
AMD	546.44	463.95	Bearish	Highly volatile round-trip price action. The sharp drop to 463.95 on June 5 on elevated volume signals aggressive distribution, testing the key multi-week support floor at 461.71.

Daily Market Report - Watchlist Technical Summary

Stock Name	Resistance	Support	Trend	Important Note
CACI	545.29	510.77	Bullish	Showing remarkable defensive characteristics, consolidating in a tight bullish structure between 525.00 and 545.00 while peer technology stocks face selling pressure.
AVGO	495.00	385.59	Bearish	Catastrophic two-day decline on massive volume (80.9M and 50.9M), breaking below multiple support levels to close near the session low of 385.59. Extreme bearish momentum.
ANET	177.48	152.19	Bearish	Complete retracement of the late May expansion. The stock has returned to the base of its range near 152.00, which must hold to prevent a deeper correction.
